Hydrocarbon accounting (HCA), is defined as “the system by which ownership of oil, gas, gas liquids and produced water is determined and tracked from the point of production to a point of sale or discharge”. The terms allocation and production reporting are also commonly used to refer to this function.

It has two essential elements. Firstly, gathering and validating flow measurement data in order to establish the definitive record of production from a facility. Secondly, it involves carrying out allocation calculations on the flow measurements to derive quantities that are not measured directly.
