Summary

Intracranial atherosclerotic disease is the progressive narrowing of the cerebral arteries within the skull (intracranial). The arteries that supply oxygen-enriched blood to the brain are the carotid arteries and the vertebral arteries. The circle of Willis is the area at the base of the brain that joins these arteries. Stenosis (narrowing) of the artery walls in intracranial atherosclerotic disease (ICAD) develops similarly to atherosclerosis of the heart: from the buildup of plaque, also known as an atherosclerotic lesion. The product in this report is Stent and PTA balloon for Treatment of ICAD.
