Abstracts

Indene (CAS 95-13-6) is a flammable polycyclic hydrocarbon with chemical formula C₉H₈. It is composed of a benzene ring fused with a cyclopentene ring. This aromatic liquid is colorless although samples often are pale yellow. The principal industrial use of indene is in the production of indene/coumarone thermoplastic resins.

Indene can come from deep processing of coal tar or from C₉ fraction. According to QYR research, most of the Indene comes from the C₉ fraction, but most of the Indene is further processed into resins because selling Indene directly is very cumbersome and has a small profit. Therefore, Indene rarely appears on the market, but this market does exist.

According to APO Research, The global Indene market was estimated at US\$ million in 2023 and is projected to reach a revised size of US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.

Global Indene (CAS 95-13-6) key players include Eastman, Shandong Kete Chemical, Guangdong Xinhua Yue Petrochemical, Neville Chemical, etc. Global top four manufacturers hold a share over 20%.

Japan is the largest market, with a share over 15%, followed by Europe, and USA, both have a share about 30 percent.

In terms of product, 65%-75% Indene is the largest segment, with a share over 95%. And in terms of application, the largest application is Coumarone Indene Resin, followed by Styrene Indene Resin.
