Summary

This report studies the Industrial Hydraulic Shock Absorber market, an industrial hydraulic shock absorber is a hydraulic device designed to absorb and damp shock impulses in industrial machinery and equipment.

Industrial shock absorbers are hydraulic components that reliably decelerate moving masses allowing machines to operate at faster speeds and reduce maintenance costs. Industrial shock absorbers work by restricting the flow of oil through a series of metering holes. When the piston rod is pushed into the cylinder, oil is displaced through differing sized holes which are progressively closed off. As a result the speed gradually decreases as the shock absorber is compressed providing the lowest possible reaction force.
