Abstracts

Inkjet paper is a special paper which is classified by its weight, brightness, smoothness and opacity designed for inkjet printers. It is manufactured from high quality deinked pulp or chemical pulp and possesses good dimensional stability. Additionally, inkjet papers and films possess good surface strength and excellent surface smoothness. Inkjet papers can be bifurcated as glossy, semi-matte, semi-gloss, satin and matte finishes. The thickness of the inkjet paper varies over a wide range. Glossy inkjet papers are made by multi-coating, resin coating or cast coating on a lamination paper. Matte inkjet papers are made by using silica and polyvinyl alcohol. These papers can be used for double sided printing and single side printing.

Photo paper is a type of inkjet paper designed for reproduction of photographs.
