Abstracts

A fleet management system is formed by the integration of hardware, software, and communication technologies. It provides a platform to fleet operators to efficiently control, track, and monitor commercial vehicles. They improve the overall operational efficiency by reducing the non-value-added activities of the operators. Fuel cards are used for fuel management while driver safety systems monitor driver behavior. Other solutions are employed for locational tracking of vehicles, driver navigation assistance, and ensuring that the operators meet the regulatory standards set by their respective national governments.

The Internet of Things (IoT) helps in smooth connectivity of all the vehicles in a fleet, which not only helps to gain better insight into the driver's behavior but also assists in monitoring the health of the fleet from any device. Rising demand for fleet safety and data management coupled with the growing need to reduce the total cost of ownership (TCO) and achieve fuel efficiency are anticipated to drive the adoption of IoT technology in fleet management systems.

According to APO Research, The global IoT Fleet Management market was estimated at US\$ million in 2023 and is projected to reach a revised size of US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.
