Summary

A Jaundice meter is an instrument that measure the yellowish pigmentation of the skin and other mucous membranes caused by hyperbilirubinemia (increased levels of bilirubin in the blood). They are broadly utilized in children's hospitals, baby caring centers all around the world.

Neonatal jaundice occurs frequently in newborn babies¹ and has long been a concern for healthcare professionals. If left untreated it can have severe consequences for the child, so early detection is vital. The use of visual inspection alone is widely considered unacceptable as it can lead to false estimates², with babies then being put at risk of hyperbilirubinemia due to under-estimation. Equally visual examination may also lead to over-estimation of babies at risk, resulting in unnecessary invasive blood testing of total serum bilirubin (TsB).

It is recognized that the bilirubin levels of newborn infants often peak two to four days after delivery, after most term babies have gone home and can lead to them needing to be readmitted to hospital for treatment. Screening using a non-invasive measurement can thus offer a simple and convenient way to avoid later complications.

Once diagnosed jaundice can often be simply treated by using a phototherapy system to break down excess bilirubin levels. Transc Jaundice Meter provides consistent quality screening. Nurses can optimize the efficiency of jaundice management programs, save time and money while delivering an exceptional standard of care.

The Jaundice Meter streamlines jaundice screening practices by eliminating time-

consuming blood draws, scheduling of laboratory work, and processing costs. It improves efficiency by delivering reliable measurements with significantly fewer steps, which frees up more time for direct infant care. The data transfer functionality and barcode scanner help the user optimize the screening programs and reduce the risk of human error.

Most of the Jaundice Meter have reusable probe tips, they require no disposables. With the volume of screenings performed in nurseries today, the cost of such disposable items can ultimately exceed the initial cost of the device itself.
