### Summary

Lab balance is a class of balance designed to measure small mass in the sub-milligram range.

A top loading balance (also referred to as top loader balance) is among the most common types of weight measuring scales used in the laboratory. Top loading balances are available in a variety of sizes and weight capacities, from 20 g to 64.1 kg.

The measuring pan of an analytical balance (0.1 mg or better) is inside a transparent enclosure with doors so that dust does not collect and so any air currents in the room do not affect the balance's operation.
