Summary

Medical oxygen is used widely in modern hospital, clinic, household and remote filed to provide a basis for virtually all modern anaesthetic techniques, COPD, cyanosis, shock, severe hemorrhage, carbon monoxide poisoning, major trauma, cardiac/respiratory arrest etc.

For overall more economical, more convenient used by patients, safer storage and transport reasons, the process producing medical oxygen is tending to shift from traditional Cryogenic Distillation process to Pressure Swing Absorption (PSA will be introduced as bellows) process, which is a reliable technique for small to mid-scale oxygen generation. This technology boosts ambient air through a zeolites adsorptive material provides $93\pm 3\%$ concentration oxygen via cylinders or air-distribution pipelines.

PSA medical Oxygen system is typically consisted of: compressor, air purify components, PSA oxygen generator, cylinders, and PLC control system, (sometimes involve with infrastructure). This report will mainly focus on studying the PSA Medical Oxygen Systems products.
