Summary

MRI Metal Detector refer to the Ferromagnetic Detection Systems for entry to MRI room. Audio and Visual alarm indication are integral with sensor array. Ferromagnetic objects taken through the MRI door into Zone 4 can lead to serious injury, time consuming delays, or costly damage to the valuable imaging system. When ferrous objects reach the MRI magnet's fringe field, they can be strongly attracted, at high speed, towards the magnet's core. This frightening and dangerous phenomenon is known as the projectile effect.

MRI Metal Detector gives radiologists and patients opportunity to make sure they are free of any metallic objects. While conventional metal detectors have been used to help identify metal objects in and on patients, but they are not 100 percent accurate and can give false-positives and false-negatives. Recent study shows that professional ferromagnetic detectors have 99 percent sensitivity.
