## Abstracts

Composite zirconia refers to the composites of zirconium oxychloride and rare earth. According to the different formulations, the proportion of rare earth in the composites always changes. Yttrium oxide is most popular rare earth used in the composite, others also include lanthanum oxide and cerium carbonate and so on. It is a white powder.

Nano zirconia, also ZrO<sub>2</sub> nanoparticle, is white powder of high purity. It appears oblique crystal at low temperature and shows tetragonal crystal formation at high temperature. When at high temperature, it has electrical conductivity and good strength and toughness. Nano ZrO<sub>2</sub> also possesses good mechanical, thermal, electrical and optical properties.
