Abstracts

An umbilical, or umbilical cable, is a static or dynamic cable that is the vital link between subsea production and processing systems and the surface, as well as between elements within the larger subsea system via flying leads. Umbilicals are composite cables that have the ability to carry out a large range of processes. Their purpose includes: hydraulic power and chemicals; electric power; and telecommunications (fibre optics). Umbilicals are able to complete an assortment of tasks, including activating wells, managing subsea control panels, feeding information about temperatures, pressures, flows and well integrity back to the surface control teams, supplying hydraulic and electric power to wellheads and manifolds, as well as delivering chemicals to the subsea wells and into the production flows.
