Summary

Organic Vegetables production relies on ecologically based practices, such as biological pest management and composting, and crops are produced on land that has had no prohibited substances applied to it for at least 3 years prior to harvest. Soil fertility and crop nutrients are managed through tillage and cultivation practices, crop rotations, and cover crops, supplemented with manure and crop waste material and allowed synthetic substances. Crop pests, weeds, and diseases are controlled through physical, mechanical, and biological control management methods. Organic Vegetables must be stored and shipped separate from conventionally grown produce. Organic produce is shipped or packed in containers free from synthetic fungicide, preservative, or fumigant.
