## Abstracts

Ozone disinfection machine, namely ozone generator, is a device that produces ozone gas, which is then released into an area containing either air or water to kill microorganisms and remove odors. ozone disinfection machines are used to purify air or water, destroying bacteria and removing many undesirable substances. Often, they use high-voltage electricity to produce ozone.

In our report, we define the ozone disinfection machine as ozone generator system that is consisted of feed gas systems, ozone generators, ozone generator cooling, ozone water mixing/contacting, ozone vent gas treatment, ozone decomposition systems, ozone residual removal, ozone water treatment system Instrumentation and others. We only count ozone disinfection machine which can be used in water treatment of chemical factories, waterworks and swimming pools and we converted different ozone production of ozone generator into 10kg/h ozone production of ozone generator.
