Summary

An implanted port (also known as a “port”) is like an artificial vein. It will make it easier for doctors and nurses to access the blood vessels for medications and tests.

A port is a small medical appliance that is installed beneath the skin. A catheter connects the port to a vein. Under the skin, the port has a septum through which drugs can be injected and blood samples can be drawn many times, usually with less discomfort for the patient than a more typical 'needle stick'.
