Abstracts

Perfluoropolyethers (PFPE) is a kind of synthetic polymer which is liquid at room temperature. It is mainly used as lubricant for space mechanical components.

The main chain of perfluoropolyether is composed of - CF₂ - O - CF₂ - such ether chain, which is different from the perfluoroethylene chain of - CF₂CF₂ - because of its flexibility, low glass transition temperature and wide range of common liquid temperature (from freezing point to boiling point). On the other hand, due to the strong electron absorption effect of fluorine element, the polymer does not show ether property, so it has good heat resistance, chemical stability, oxidation stability and complete incombustibility.

According to APO Research, The global Perfluoropolyethers market is projected to grow from US\$ million in 2024 to US\$ million by 2030, at a Compound Annual Growth Rate (CAGR) of % during the forecast period.

Global Perfluoropolyethers key players include Dupont (Chemours), SOLVAY, DAIKIN, etc. Global top three manufacturers hold a share over 60%.

North America is the largest market, with a share about 40%, followed by China and Europe, both have a share over 50 percent.
