## Abstracts

Environmental monitoring during pharmaceutical and biopharmaceutical production is crucial for ensuring the safety of formulated drug products. While requirements for the control of both viable (living microorganisms) and non-viable particles (e.g. dust, hair, etc.) and other contaminants (i.e. trace metals, volatiles, etc.) for aseptic manufacturing operations are more extensive than those for non-sterile processes, the quantity of samples that must be analyzed and the amount of data generated can be daunting regardless of the final drug form, particularly for global companies with multiple production facilities.
