Summary

Pneumatic tourniquet system consists of a pressure regulated control unit, tubing and an inflatable tourniquet cuff. The cuffs inflate with air, oxygen or nitrogen to a preset pressure to compress the patient's blood vessels during surgical procedures, thus ensuring a bloodless operative field.

They are contraindicated for use in neonates, patients with peripheral vascular disease, thrombosis, or embolism. Both disposable and reusable tourniquets cuffs are available. Disposable cuffs are intended for single-use only and reusable cuffs are intended to be cleaned and inspected prior to their multi-use.
