Abstracts

Powder Molding Hydraulic Press Machine is suited for powder compaction applications. Powder Compaction is a flexible process that allows the end user to create a multitude of different parts at a variety of yield strengths for simple to complex shapes. It is capable of forming complex shape molded parts with uniform density throughout a varying cross section and can handle different range of powder materials. Pressing parameters can be specified by weight, density, size, or shape. In these Hydraulic Presses, powder is pushed into molds and the compound into the shape of the product. The final result of compacting process may be a simple tablet or perform or it may be a precision, high tolerance component part as intricate as a gear or special cutting tool.
