Abstracts

Extension cords, also known as power extenders or extension leads, are longer power cords that are used to supply electrical energy to portable electrical equipment or appliances located up to hundreds of feet away from a main power source.

Equipment such as construction machinery, sound and lighting equipment, emergency medical defibrillators and electrical power tools are often used in locations without a convenient power source, and extension cords are thus used to supply the current to the equipment. Extension cords are only designed for temporary usage, and not as a means of permanent or long-term power supply.
