Abstracts

Polyvinylidene fluoride (PVDF) is a type of thermoplastic fluoropolymer, which possess high inertness and stability. It is formed from polymerization of vinylidene difluoride. PVDF resins are used for easy processing in the molding, extrusion, and compounding as thermostatic polymer. It is also used as powder to make solutions, additives, and others. It has high chemical resistance toward chlorine, bromine, iodine, and other acids at high temperature. It is available as piping products, sheet, tubing, films, plate and an insulator for premium wire. It can be injected, molded, or welded and is commonly used in the chemical, semiconductor, medical, and defense industries, as well as in lithium-ion batteries. It is also available as a cross-linked closed-cell foam, used increasingly in aviation and aerospace applications.
