## Abstracts

Recycling is the collection of used materials that would otherwise be waste to be broken down and remade into new products. Motivations for recycling include environmental sustainability and financial concerns sustainability because the reused material both prevents waste and reduce the consumption of new raw materials, and financial because it can be cheaper to produce different products from recycled materials. One of the main usages of this process is recycling of polymer materials and wastes, specially those made up of polypropylene and polyester.

This report focuses on Recycled PET Chips. PET, or polyethylene tephthalate, is semi-rigid to rigid, depending on thickness. It makes a good barrier method, especially for use in water bottles, soft and fizzy drink bottles, pots, tubs, oven ready trays, jam jars soft drink bottles. PET can be produced in a thin film, such as that which is used to make Mylar. It is also used for flexible food packaging. When recycled, it is made into fiberfill, carpeting, or non-food containers and bottles.
