Summary

Reprocessed of medical devices refers to the process of inspecting, cleaning, testing, sterilizing and packaging of used and expired medical devices, such that the devices remain effective and safe for suitable clinical application.

Single use devices (SUDs) that have already been used are proposed to redefine as waste material. Manufacturers reprocess used SUDs to produce new medical devices to make them available for use. For the user, this has the advantage that no matter whether they use a new device from an original manufacturer or a renewed device from the reprocessor, the safety of the device is guaranteed.
