Abstracts

Lights are easily one of the most important fixtures present on a runway. Runway lights guide pilots during the takeoff and landing procedures. In reality, all lights on an airfield are essential to the safe and efficient aircraft operations during takeoff, landing, and taxiing.

Runway edge lights are white, transitioning to amber near the departure end of the runway. The ends, or thresholds, of the runways have green lights at the “beginning” of the runway, or approach end. The departure end is marked by red lights delineating the end of operational pavement. Recessed in-pavement runway lights, also white in color, are common at most large airports to provide enhanced runway visibility. These lights are typically used in conjunction with approach light systems, which extend beyond the runway ends, providing a visual queue for the pilots to line-up the aircraft during approach.
