Abstracts

Antimicrobial action of silver comes from the chemical properties of its ionized form “Ag⁺”. Silver interrupts the bacteria cell’s ability to form the chemical bonds essential to its survival. These bonds produce the cell’s physical structure so when bacteria meets silver it literally falls apart. For this reason, silver-based antimicrobial agent is especially in demand in many applications.

Silver-based antimicrobial agent has two forms: dispersion liquid and powder. Dispersion liquid antimicrobial agent mainly used in textile industry. In this report, both dispersion liquid and powder are counted.
