## Abstracts

The palmitic acid in human milk is positioned in a very unique way to the second (middle) position of the glycerol back bone also known as sn-2 position (figure 2). In human milk, approximately 70-75% of the palmitic acids is esterified to the sn2 position of the triglyceride (sn2 palmitate). In contrast, vegetable oils only have about 8-10% of their palmitic acid attached to sn2.
