Summary

Soft magnetic materials exhibit magnetic properties only when they are subject to a magnetizing force such as the magnetic field created when current is passed through the wire surrounding a soft magnetic core. Soft ferromagnetic materials are generally associated with electrical circuits where they are used to amplify the flux generated by the electric currents. These materials can be used in alternating current (AC) as well as direct current (DC) electrical circuits.

A magnetic core is a piece of magnetic material with a high magnetic permeability used to confine and guide magnetic fields in electrical, electromechanical and magnetic devices such as electromagnets, transformers, electric motors, generators, inductors, magnetic recording heads, and magnetic assemblies.
