## Abstracts

A spice is a dried seed, fruit, root, bark, or vegetable substance primarily used for flavoring, coloring or preserving food. Because they tend to have strong flavors and are used in small quantities, spices tend to add few calories to food. Many spices, however, can contribute significant portions of micronutrients to the diet.

A spice may have other uses, including medicinal, religious ritual, cosmetics or perfume production, or as a vegetable.

A spice may be available in several forms: fresh, whole dried, or pre-ground dried. Generally, spices are dried. A whole dried spice has the longest shelf life, so it can be purchased and stored in larger amounts, making it cheaper on a per-serving basis. Some spices are not always available either fresh or whole, for example turmeric, and often must be purchased in ground form. Small seeds, such as fennel and mustard seeds, are often used both whole and in powder form.

In this report, it includes the dried plant product used primarily for seasoning purposes or medicine effectiveness etc.

According to APO Research, The global Spices market was estimated at US\$ million in 2023 and is projected to reach a revised size of US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.
