Summary

This report studies the Synthetic Leather for Furniture Market.

Synthetic Leather is a manmade fabric that looks like leather. It has leather like surface and is dyed and treated to make it have the look and feel of real leather. It is often used as a substitute for real leather because it is less expensive and it does not require using a real animal hide to create.

Synthetic Leather was first produced near the turn of the century. The insufficient supplies and high cost of genuine leather brought about the demand for Synthetic Leather. Synthetic Leather has gradually replaced genuine leather in many fields. Over the past few decades, the demand for high quality Synthetic Leather has increased tremendously.

Though there are a number of materials used to produce Synthetic Leather, PU and PVC remain the most commonly used choices in market. PU Synthetic Leather is more flexible and has a much higher tensile, tearing and bursting strength. Furthermore, whereas PVC Synthetic Leather can only be used to make items with a low stress tolerance, PU Synthetic Leather can be used to make a wide variety of products which must be made from strong materials with a high stress tolerance such as boots, shoes bags, luggage, belts, gloves, and upholstery for furniture and car seats.
