Abstracts

This report studies the Terahertz Imaging Inspection market, from angles of players, regions, product types and end industries, to analyze the status and the future.

The 'terahertz gap' – where until recently bright sources of light and sensitive means of detection did not exist – encompasses frequencies invisible to the naked eye in the electromagnetic spectrum, lying between microwave and infrared in the range from 0.3 to 3THz. Terahertz radiation, also known as t-rays, has wavelength of 3-100 μm .

Terahertz imaging is an emerging and significant nondestructive evaluation (NDE) technique used for dielectric (nonconducting, i.e., an insulator) materials analysis and quality control in the pharmaceutical, biomedical, security, materials characterization, and aerospace industries. It has proved to be effective in the inspection of layers in paints and coatings, detecting structural defects in ceramic and composite materials and imaging the physical structure of paintings and manuscripts. The use of THz waves for non-destructive evaluation enables inspection of multi-layered structures and can identify abnormalities from foreign material inclusions, disbond and delamination, mechanical impact damage, heat damage, and water or hydraulic fluid ingress. This new method can play a significant role in a number of industries for materials characterization applications where precision thickness mapping (to assure product dimensional tolerances within product and from product-to-product) and density mapping (to assure product quality within product and from product-to-product) are required.

Terahertz imaging, which is already familiar from airport security checkpoints, has a number of other promising applications. Terahertz biomedical imaging has become an area of interest due to its ability to simultaneously acquire both image and spectral

information. Terahertz imaging systems are being commercialized, with increasing trials performed in a biomedical setting.

Terahertz Imaging Inspection could be used for Homeland Security and Defense, Pharmaceutical & biomedical Industry, and other industry.
