Abstracts

Thermal treatment air filtration is a method of filtering exhaust gases generated by various industrial processes. The exhaust gases are heated to a very high temperature in the oxidizing chamber, thus breaking the bond between polluting compounds. The compounds then mix with the oxygen present in the chamber to form CO₂ and H₂O. It is suitable for removing hazardous airborne pollutants, VOCs, and other toxic chemicals from the industrial air stream. This technique can purify the industrial air stream to purity levels of up to 99.5%.
