Summary

Thermoforming is a manufacturing process where a plastic sheet is heated to a pliable forming temperature, formed to a specific shape in a mold, and trimmed to create a usable product. The thermoforming machine is a machine for deep-drawing a thermoplastic sheet-like material under heating conditions to form a packaging container or other products and then filling and sealing it. The steps of filling, packaging, sealing, cutting, trimming can be performed separately on the thermoforming packaging machine.
