### Summary

UV (Ultraviolet) Light Disinfection refers to the process that is used to sterilize the water, air, food and beverage and others. UV disinfection equipment uses UV light for the disinfection process and does not involve the usage of chemicals. Hence, UV disinfection is considered more user-friendly and eco-friendly than other types of disinfection equipment. UV light has become an established water treatment disinfection technology due to its extremely effective ability to kill or inactivate many species of disease-causing microorganisms. Ultraviolet light disinfection is effective on bacteria, protozoan parasites (e.g. Giardia, Cryptosporidium), and can also be effective for most viruses, providing sufficiently high UV dosage rates are used.
