Summary

Welding is a fabrication or sculptural process that joins materials, usually metals by causing fusion, which do not melt the base metal. a filler material is typically added to the joint to form a pool of molten material (the weld pool) that cools to form a joint that is usually stronger than the base material. Pressure may also be used in conjunction with heat, or by itself, to produce a weld. Welding also requires a form of shield to protect the filler metals or melted metals from being contaminated or oxidized. Welding Wires & Welding Electrode is the basic consumable material
