Summary

White cement is a powdery material which hardens when mixed with water. It serves as binder for natural and artificially processed aggregates, such as sand and gravel, for production of mortar, plaster and concrete. White cement has essentially the same properties as grey cement, except for color. The whiteness of the cement depends on the raw materials and the manufacturing process. It is the metal oxides primarily iron and manganese that influence the whiteness and undertone of cement.

In order to get the color of the white cement, its method of production is different from that of the ordinary cement. However, this modification in its production method makes White Cement far more expensive than the ordinary cement.

There are white portland cement, white masonry cement, white portland limestone cement and other product types, in this report, it covers all kinds of white cement.
