The difference between refined grains (such as refined wheat, white flour, and white rice) and whole grains (such as whole-wheat flour, barley, cornmeal, oats, and popcorn) is that a whole grain still contains the nutrient rich germ and the fiber rich bran. Refined grains go through a milling process that removes the bran and the germ, which eliminates most nutrients.

Also growing awareness regarding health benefits offered by whole grains is encouraging the shift toward these foods. High fiber foods are also gaining from research studies highlighting the effectiveness of these foods in preventing and curing certain gastro-intestinal diseases and conditions.
