Abstracts

Worm Gear is used to transfer movement and power of two alternating axis, it is a unit generally include a Worm Gear and a Worm.

Worm Gears are normally used when a high gear ratio is desired, or again when the shafts are perpendicular to each other. One very important feature of Worm Gear meshes that is often of use is their irreversibility: when a Worm Gear is turned, the meshing spur gear will turn, but turning the spur gear will not turn the Worm Gear. The resulting mesh is 'self-locking', and is useful in achieving mechanisms.
