Summary

Hydraulic Door Closer is a mechanical device that uses hydraulic (oil-filled) dampers to limit the speed at which the door closes. Some closers allow for adjustment of the strength of the spring, making it easier or more difficult to push the door open. Choosing a door closer can involve the consideration of a variety of criteria. In addition to the closer's performance in fire situations, other criteria may include resistance to opening forces (for use by disabled or infirm), control over the rate of closing, safety, durability, risk of vandalism, anti-ligature and aesthetics.
