Abstracts

Vaporized hydrogen peroxide (VHP) is a broad-spectrum antimicrobial with virucidal, bactericidal, fungicidal, and sporicidal activity. VHP is a relatively rapid sterilization technology. VHP is produced by the vaporization (at 120°C) of liquid hydrogen peroxide to give a mixture of VHP and water vapor. As a “dry” process, the concentration of VHP is maintained below a given condensation point, which is dependent on the area temperature. Its advantage over other gaseous technologies is that it decomposes to water and oxygen, which are relatively safe and so-called residue free.
