Summary

Infant Radiant Warmer is a bed for stabilizing the body temperature of a newborn or premature infant. It has a heat source positioned above the baby to keep his or her temperature constant. In detail, the infant radiant warmer is a mobile, battery powered device that addresses severe heat loss suffered by some infants by allowing the infant's bed to be uniformly heated. This is done by infrared radiation (IR) from a quartz heater that is beamed by a parabolic reflector uniformly over an infant's bed. The device has a sensitive thermostat that does not require calibration to use it. The control panel can sense the infant's temperature quickly through the use of a highly sensitive thermistor probe.
