Abstracts

Mechanical vapor recompression (MVR) is an energy recovery process where energy is added to low-pressure vapor (usually water vapor) by compressing it. The result is a smaller volume of vapor at a higher temperature and pressure, which can be used to do useful work.

Mechanical Vapor compression evaporation is an evaporation method that uses a blower, compressor, or ejector to compress and thus increase the pressure of the generated vapor.

This report collects the data of compressor in MVR system.
