## Abstracts

Metal spinning is a form of symmetrical metalworking where a flat circle, or circular, piece of metal is fitted into a hand lathe or CNC lathe. Held in place by a pressure pad, the metal disk is spun at an appropriate speed. A localized force utilizing a variety of rollers or tools is applied either by hand or by machine to gradually form the metal over a “chuck” or mandrel. In complex spinnings, multiple chucks may be used to accomplish a specific shape.

This report mainly focuses on the Metal Spinning Machine, instead of Flow Forming Machine.
