## Abstracts

### Summary

Modified Bitumen has high elasticity and thermal stability. An asphalt concrete surface based on Modified Bitumen is highly resistant to the formation of ruts, withstands high traffic loads, and is crack-resistant at low temperatures. There are three main components in Modified Bitumen production. Firstly, conventional asphalt is used as a base. Secondly, there is a plasticizer which gives the bitumen plasticity and improves dilution of the polymer. And the third component is the polymer itself. The process used to produce Modified Bitumen involves mixing these three components using a specific production process.
