## Abstracts

Corrosion inhibitors are chemical compounds that are added in small concentration to a fluid to minimize or prevent the corrosion-related problems triggered by widely varying processing conditions and concentrations of salts and water at different stages of oil and gas production processes.

Oilfield corrosion inhibitors are widely used in the petroleum industry. From oil drilling, mining, gathering and transportation to refining, corrosion inhibitors are often used. Especially in the development of high-sulfur oil and gas fields, due to the severe corrosion of hydrogen sulfide gas to drill pipe equipment and tubing and casing, corrosion inhibitors resistant to hydrogen sulfide corrosion must be used. For oil and gas wells to be acidified, high temperature acidification corrosion inhibitors must be used; in addition, oilfield oily wastewater treatment and re-injection should also use corrosion inhibitors for anti-corrosion treatment.
