Abstracts

PFAD stands for Palm Fatty Acid Distillate. It is a processing residue resulting from physical refining of crude palm oil products. At room temperature it is a light brown semi-solid, melting to a brown liquid on heating. Up to 70-80 percent of PFAD is free fatty acid (FFA), with palmitic acid and oleic acid being the major components. The remaining 20 percent is made up of components including triglycerides, partial glycerides, and vitamin E, sterols and squalene. PFAD (Palm Fatty Acid Distillate) is used in many industries such as laundry soap, animal feed industries and also as raw material for the oleo chemical industry. PFAD is also often considered as a valuable and low-cost raw material for bio-diesel production.
