Abstracts

A PDMS is a computer-based information system which facilitates the collection, integration, retrieval and interpretation of the multi-source (e.g. hospital information system, laboratory system, bedside devices) multi-variant (e.g. images, numbers, text) data found in intensive care units.

A PDMS is considered a medical product performing calculations or interpretations of patient-specific data for diagnostic or therapeutic purposes, e.g. dosage of medication. PDM systems can support clinicians in their everyday work, in a way that is not possible with paper-based documentation. If a PDMS has not been certified as a medical product, physicians and nurses must use the original data source every time they take a therapeutic decision.
