Abstracts

This report studies the Press Fit Connector market. By their name, press-fit connectors are pressed through properly dimensioned plated-through holes on a printed circuit board (PCB). This technology is an alternative to the soldering method and offers a number of advantages over its more traditional counterpart. With press-fit connectors, you can eliminate a number of negative aspects that come along with soldering: thermal stress on the PCB, cold solder joints, shorts (caused by solder bridging), and the elimination of lead-free solder, which introduces its own set of problems. Press-fit connectors are also easily repaired, more environmentally friendly, and cost effective.

According to APO Research, The global Press Fit Connector market was valued at US\$ million in 2023 and is anticipated to reach US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.
