Abstracts

Sparkling wine is a type of wine with high carbon dioxide levels, which makes it fizzy. The bubbles result from natural fermentation that occurs either in the bottle or in a large tank.

The fermentation happens when sugar is added to wine, and yeast starts acting on the sugar, releasing carbon dioxide. This carbon dioxide trapped inside a sealed space creates bubbles in the wine.

Many people refer to sparkling wine as Champagne. However, this term is exclusively reserved only for the sparkling wines made in the Champagne region of France.
