Abstracts

This report studies the unsaturated polyester resins market, from angles of players, regions, product types and end industries, to analyze the status and the future.

Unsaturated polyester resin is produced first by esterificating diacid and diol to polymer form, then using styrene monomer to dissolve polymer into syrup form resin creating unsaturated polyester resin, this is what we called UPR. The advantages of UPR are easy blending with filler and create excellent properties under room temperature with normal pressure. After applying pressure with heat, UPR can be formed into high hardness products with excellent mechanical properties. UPR has distinct properties in weather resistance, chemical resistance, water resistance and cold resistance. UPR is widely used in soft mold casting, button, boards, artificial marble, furniture, corrugated roofing, storage tanks, pipe line, yachts, fishing rods and many other construction FRP materials.

According to APO Research, The global Unsaturated Polyester Resins (UPR) market was valued at US\$ million in 2023 and is anticipated to reach US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.

Global Unsaturated Polyester Resins (UPR) key players include Ashland, DSM, BASF SF, Reichhold, etc. Global top four manufacturers hold a share about 25%.

China is the largest market, with a share about 30%, followed by Europe and USA, both have a share over 40 percent.

In terms of product, Unsaturated Polyester Resin For Non-FRP is the largest segment, with a share about 55%. And in terms of application, the largest application is Fiber

reinforce plastic (FRP), followed by Artificial marble, Artware, Button, Coating, etc.
