Abstracts

Water treatment technologies are organized into three general areas: physical methods, chemical methods, and energy intensive methods.

Chemical methods of treatment rely upon the chemical interactions of the contaminants we wish to remove from water, and the application of chemicals that either aid in the separation of contaminants from water, or assist in the destruction or neutralization of harmful effects associated with contaminants. Chemical treatment methods are applied both as stand-alone technologies and as an integral part of the treatment process with physical methods.

In this report, we mainly research water and wastewater treatment chemicals including Ph adjusters & softeners, flocculants & coagulants, corrosion inhibitors, scale inhibitors/dispersants, biocides & disinfectants and others.

According to APO Research, The global Water and Wastewater Treatment Chemicals market was valued at US\$ million in 2023 and is anticipated to reach US\$ million by 2030, witnessing a CAGR of xx% during the forecast period 2024-2030.
